

TEST REPORT –GLUTEN TESTING

Client details: Sublime With Lime (Pty) Ltd	Date of Report: 2021-10-26	Analysis ID.: 33999
Shop No.2 Cnr Of Meade & Hibernia	Date of Sample Receipt: 2021-10-20	
George Central	Date of Analysis: 2021-10-25	No. of pages: 1
George		Enquiries: Jana Coetzee
For Attention: Denise Robertson		

Sample details

Client sample identification: Cranberry & SuperSeed Rusks	Sample ID No.: 27275
Sample conditions: Rusks, Shelf-stable	Issue: 1
No. of samples submitted: 2x Packet	Known sample deviations: None
Sample drawn by: Client	

Analysis details

Test description: LC-MS/MS	Method identification: P5.4_17
Additional method information: Protein detection and quantification by LC-MS/MS. Validated for specificity and sensitivity in various matrices.	Deviations from standard method: None
Method cross-reactivity: No cross-reactivity reported.	Known factors influencing test results: None

Regulatory Aspects

According to the South African Foodstuffs, Cosmetics and Disinfectants Act, 1972 (Act 54 of 1972) - Regulations Relating to the Labelling and Advertising of Foodstuffs, No. R. 146 (1 March 2010):

- Gluten must be declared on food product labels when present in the product, its ingredients or in its packaging material.
- The claim 'gluten-free' is not permitted for a food that: contains an ingredients that is or has been derived from any species of the significant cereals; and/or contains equal or more than 20 mg/kg gluten in the end product, when the level is determined by the R5 Mendez Enzyme-Linked Immunosorbent Assay (ELISA) for gluten, or other Codex-recommended methods.

TEST RESULTS

Method:	Method ID:	LOD* Quantification range:	MoU:	Your sample results				Result type:
				Lab ref.	Gluten ^:	Unit	Interpretation:	
LC-MS/MS	P5.4_17	1.0 ppm*	n/a	27275	Not detected	n/a	<LOD	Qual
LC-MS/MS	P5.4_17	1.0 - 1000 ppm		27275		mg/kg (ppm)		Quant

Comments: Gluten not detected.

<LLOQ = Below lower level of quantification of the method
WROQ = Within range of reliable quantification of the method
>ULOQ = Above the upper limit of quantification of the method

MoU = Measurement of Uncertainty
Method is SANAS accredited for qualitative results only

There are currently no specified allowable levels set for gluten in South Africa. Stipulations for 'gluten-free' claims are indicated in R.146/2010 and summarised above.

LOD: Limit of Detection

Please note that:

- This report refers to results obtained from the representative sample tested. FACTS in no way warrants, represents or implies that the rest of the same batch will achieve a similar test result. For more detail, please see Section (f) 'General Consulting' in the FACTS Terms and Conditions (<https://www.factssa.com/Docs/TsCs.pdf>).
- The integrity of the reported result is valid only from the time of sample receipt by FACTS.
- This report is issued by FACTS under its Terms and Conditions, available online at <https://www.Factssa.com/Docs/TsCs.pdf>, and the Acceptance Note as completed and confirmed by the parties thereof.
- Due to the deterioration of the samples, perishable samples are not stored for future enquiries, whereas non-perishables will be stored for a period of 10 days after testing has been conducted.
- This report may not be reproduced, except in full. When only certain pages or sections of the full report are reproduced, written permission must be obtained from FACTS.
- All opinions and interpretations expressed herein are based on test method literature, relevant legislation, sound guidance documents and/or technical knowledge and experience.
